

Lartisan Style Guide

Version 1.0 | 29 May 2026

Primary is Leadprenuer blue. Secondary is Lartisan orange.
All other colors support tertiary, status, and surface roles.

Palette source: Leadprenuer homepage brand variables.

Brand Position

Lartisan should feel trustworthy, local, premium, and operationally competent. The interface must balance marketplace warmth with dashboard clarity for customers, artisans, field agents, LGA admins, state coordinators, and finance/support operators.

- Verified local skill.
- Clear accountability.
- Practical field operations.
- Financial trust.
- Calm, fast decision-making.

Color System

The base palette is derived from Leadprenuer colors found on leadprenuer.com.ng. Blue is the only primary color. Orange is the only secondary color. Gray, ink, red, surface, and border are tertiary/support colors.

Token	Hex	Usage
Leadprenuer Blue	#001c72	Primary actions, navigation, key dashboard anchors, trust-heavy headers.
Lartisan Orange	#f59e0b	Secondary actions, pending KYC, payout review, retries, attention states.
Operational Gray	#6c757d	Tertiary actions, muted labels, helper text, metadata.
Ink	#1d1d1d	Tertiary text emphasis and dense operational data.
Risk Red	#dc2626	Tertiary risk states: failed payments, rejected KYC, suspensions, destructive actions.
Surface	#f8fafc	Tertiary app background and quiet work surfaces.
Border	#d8dee8	Tertiary dividers, cards, tables, input boundaries.

Usage Rules

- Use blue for primary commitments: create booking, approve profile, save policy, process payout.
- Use orange for secondary actions and states that need attention: assign agent, review payout, pending KYC, retry upload.
- Use red only for destructive, failed, rejected, or high-risk states.
- Treat gray, ink, red, surface, and border as tertiary/support colors.
- Avoid pages dominated by blue. Pair blue with white, orange, gray, and restrained red.
- Keep dark mode readable: blue remains primary, while orange remains secondary for attention and review states.

Typography

Style	Usage
Page title	Main screen identity, one per page.
Section heading	Form sections, dashboard groups, admin modules.
Body text	Descriptions, instructions, support copy.
Label	Inputs, filters, table metadata.
Code / ID	References, transaction IDs, payout references, webhook IDs.

Layout Principles

Customer Surfaces

Customer discovery may be more visual and inviting. It should still show verified artisans, location match, rating, completed jobs, starting price, availability, and a clear next action.

Operations Surfaces

- Tables for queues and finance records.
- Filters for state, LGA, area, status, owner, and date.
- Cards only for summary metrics or repeated records.
- No nested cards.
- Keep page sections unframed unless the user is acting inside a specific tool or list item.

Mobile

- Large touch targets.
- Single-column forms.
- Persistent action area for save or submit where useful.
- Upload progress and retry states.
- Clear offline or failed-upload messaging.

Components

Buttons

Button	Usage
Primary	Main action on a screen or modal.
Secondary	Useful but lower-priority action using orange.
Outline	Navigation, evidence viewing, non-committal actions.
Destructive	Suspend, delete, reject, cancel payout, close with penalty.

Badges

State	Color
Approved / verified / completed / paid	Blue or neutral
Pending / queued / in review	Orange or neutral
Escalated / needs evidence	Orange
Rejected / failed / suspended	Red
Draft / inactive / archived	Gray

Tables and Forms

- Tables should include name, scope, status, last activity, next action, and risk or priority where relevant.
- Forms should use clear labels, group related fields, show validation near the field, preserve media state, and confirm destructive decisions.

Status Language

Avoid	Prefer
Done	Completed
OK	Approved
Bad	Rejected
Waiting	Pending
Problem	Escalated
Money sent	Paid

Accessibility

- Primary blue buttons require white text.
- Orange backgrounds need ink or very dark blue text unless used as a small badge on dark surfaces.
- Do not rely on color alone for status; pair with text and icons.
- Maintain visible focus states through the existing ring token.
- Keep touch targets at least 40px where possible.
- Make dynamic content announcements available for critical payment, KYC, and upload state changes.

Live Style Guide

The live style guide is available inside authenticated settings at:

`/settings/style-guide`

It demonstrates color roles, typography voice, journey cards, status badges, and action hierarchy. The live page should evolve as the production component set grows.
